"MINNESOTA GROWN"

Stands for Hardiness

Our Trees and Shrubs contain more vitality than those grown in any other section.

Mayfield Nurseries

Our nurseries located east of the city, are devoted to the growing of all classes of Nursery Stock, anyone interested has a standing invitation to make us a visit. We make a specialty of Ornamental Trees, Shrubs, Evergreens etc., knowing the increasing demand for this class of stock. We acknowledge it costs more to grow stock in Minnesota than in more Southern States, but we also know we have a better tree or shrub when it is grown.

Trees and plants that can stand our cold winter, contains more vitality than those grown in a more favored locality, we get a better root system.

Our Nurseries are the largest and best equipped in the Northwest. We employ a large corps of competent help, growing nothing but the best and under the most improved ideas.

We have large storage houses, packing sheds and trackage. Cars loaded without exposing stock.

All Stock in this list is grown in our nurseries at Lakeland, Minn. (the most northern in America), and guaranteed to be strictly first class and of the grade specified.

Terms When orders are accompanied by cash no charge will be made for boxing or baling, except on large trees of 2 to 2½ inches in diameter and above, sold in less than carload lots.

Orders not accompanied with cash are to be paid for upon delivery of stock, and an extra charge will be made for boxing and baling. Stock is delivered on board cars at our nurseries.

Landscape Gardening We will be pleased to consult with parties interested in parks and cemeteries and public grounds, both in laying them out and carrying out in detail the work necessary for beautifying them. Our experience of a quarter of a century in work of this class gives us the advantage over local gardeners, who do not have the wide and practical experience necessary for good work. We are prepared, in addition to furnishing all kinds of trees, shrubs and bedding plants, to carry out plan for grading, road making, planting and remodeling of unsatisfactory places, having skilled engineers to give the best of service, and will be pleased to correspond with anyone needing the services of a landscape architect.

Catalogue Free Our handsomely illustrated catalogue containing complete list and descriptions of all the leading varieties of Trees, Shrubs, Vines, Fruits, Plants and Seeds, will be mailed free upon application.

Order Early To be sure of obtaining what varieties are desired, as orders are filled in rotation. Write for prices on anything you may not find in this list.

SPECIAL NOTE—Can supply forest trees of the American Elm in hundred or carload lots from 2 inches up to 6 inches cal. Prices on application.

Birch, Cut Leaf.

This is one of the most beautiful and desirable trees for the lawn ever introduced. The branches are of graceful, drooping habit, with foliage delicately cut and very fine. The bark is silvery white, forming a beautiful contrast with the foliage. It makes a rapid growth and is perfectly hardy in all sections of the country. Mr. Scott, in his "Suburban Home Grounds" says of it: "No engraving can do it justice; like the palm trees of the tropics, it must be seen in motion, swaying in the lightest breeze, its leaves trembling in the heated summer air."

Linden.

European Linden—A large tree with spreading branches, forming a symmetrical, round-topped crown. Native of Europe. Leaves obliquely heart-shaped, bright green, fading in autumn with tones of yellow and brown. Flowers creamy white, fragrant. A handsome tree, valuable for street planting.

Silver or Soft Maple.

One of the most rapid growers, and valuable where immediate shade is required; forms a very large and compact head; its leaves are somewhat cut and are silvery beneath; does well in all soils and adapted to all climates. This is one of the best trees for driveways, giving immediate effect and having a very graceful habit

STREET OR AVENUE PLANTING

The system in vogue in many places of planting trees is not to be complimented by those who know the beauty of a tree or an avenue. We give as an illustration an avenue planted to Carolina Poplars. One can see the uniformity of such planting and the beauty it adds to the surroundings. Commonly speaking, each property holder plants when he pleases, what he pleases and where he pleases, making an unsightly street to one interested in tree culture. You have noticed many times in going through streets in front of one home will be set Soft or Silver Maple adjoining Box Elder; Box Elder adjoining Elm; Elm adjoining Carolina Poplar, and so on, the full length of the street, and many times the trees out of alignment.

This can be remedied by the property holders selecting some variety of street tree, and have these all planted at one time.

Norway Spruce—An elegant tree, extremely hardy and of lofty, rapid growth. The branches assume a graceful, drooping habit when the tree attains 15 or 20 feet in height. One of the most popular evergreens for planting either as single specimen trees, or in masses for effect or shelter. It is one of the best evergreen hedge plants.

Colorado Blue Spruce—A form of *P. pungens*, with the same general character, but foliage of an exceedingly rich silvery blue. One of the most valuable trees for ornamental planting, giving a very distinct color note in any situation.

Spirea Van Houttei.

No variety has found such general favor and been so largely planted as this. As with others of the Spireas, the growth is long and slender and the branches thickly covered with small white flowers in May and June. When these fade, the charming habit of the plant still renders it beautiful.

Snowball.

Large Flowering—Attains a height of 10 to 12 feet. Blooms in the latter part of May and is used extensively for Memorial Day decorations. Flowers are large balls, pure white, borne in clusters of 5 or 6.

Hydrangea Snowball.

Known as *Brandiflora Alba*—A grand addition to the summer flowering hardy shrubs. Comes into bloom just at a time when there is a scarcity of outside white flowers, along through July and August. Makes a plant much like the common *Hydrangea*, but blooms with purest snow-white flowers, shaped much like the Snowball, but much larger and more attractive.

Clematis, Paniculata.

An excellent vine of rapid growth, quickly covering arbors or trellises with handsome, glossy green foliage. Small white flowers, borne in long, slender clusters, cover the plant in a sheet of bloom late in summer, and are delightfully fragrant; following these the clouds of feathery gray seeds are almost as attractive as the flowers, until blown away by autumn winds after the leaves have fallen. Valuable and effective for any place where a vine is needed, or when tied to a stake and grown as a bush

HARDY PERENNIAL PLANTS

No class of plants will yield better or more pleasing results for the money invested than these Hardy Perennials. They require very little care or attention, are perfectly hardy, and yield a rich harvest of bloom.

They are all showy and beautiful plants of easy cultivation, and of various seasons of flowering, from may to November. By judicious selection, a continuous display of flowers may be obtained from early spring to the end of autumn. Parties in ordering will do well to leave the selection to us.

HEDGING

Rosa Rugosa—This Japanese Rose forms a sturdy bush 4 to 5 feet high, covered with large, dark green, glossy foliage, crowned with terminal clusters of 10 to 12 flowers, each 3 inches in diameter. Perfectly hardy. A valuable plant for the hardy border or shrubberies, its large, handsome fruits being very ornamental all through the autumn and winter months. It also makes a splendid hedge, its foliage being impervious to the attacks of insects of all kinds.

A Hedge of Rosa Rugosa

Berberberry Thunbergii.

Nothing can take its place as a low ornamental hedge for gracefulness or beauty. Its habit is low and stately; slightly drooping, and forms a hedge as broad as it is high; it has every good quality—beautiful habit, fine foliage, free-flowering qualities—but its greatest charm is the great quantities of crimson berries which it produces in the summer, and which remain on the bushes all winter, making it very effective in the winter landscape. It is also fine for cutting for house decoration, almost equal to the holly.

American Arbor Vitae

Hardy Hedges

for the Northwest

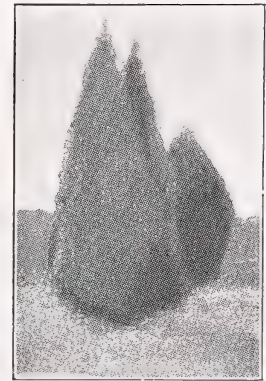

GROWN BY

L. L. MAY & CO.

Nurserymen, Florists and Seedsman

ST. PAUL,

MINN.

Arbor Vitae Pyramidal

*"Hedges are more appropriate for a lawn
than a fence: more attractive for a border"*

The subject of Hedges is a very important one to many with Country and City Homes. There are so many ways for them to add attractiveness to private grounds, often along a walk or driveway, again acting as a screen to shut out some unsightly bank or hollow, for divisions between lots and as a fence along the highway.

For years we have experimented testing everything introduced, knowing the demand for the hardy Hedges and now we have secured varieties that are entirely satisfactory.

Buckthorn Hedge at our Nurseries—Three years planted

IT IS TRUE in the Northwest we are deprived of some of the best Shrubs and Plants, also Trees as well as Hedges for their lack of hardness.

In Eastern and Southern localities the Privets are used most extensively, especially around Salt Waters where it thrives best; this plant is used for a formal Hedge, and is valued for its quick and rapid growth.

Testing the various sorts and to get something to take the place of the Privet, we have found Buckthorn (English) Rhamnus, and Catharticus perfectly hardy, stands trimming, giving the same formal effect, but not as rapid in growth.

We have enumerated in this list various sorts so that all can be pleased, and would recommend where a winter effect is desired Cornus Siberica Alba its beautiful crimson bark makes it very desirable and it carries this color just as long as it has no foliage.

We would also especially call attention to Berberry Thunbergi, perfectly hardy and with its graceful stems, its red berries in the Autumn as well as its beautiful Autumn foliage, makes it one of the best, but it should not be planted where a formal Hedge is desired as it should not be pruned in the growing season.

Deciduous Hedges

Buckthorn (*Rhamnus Catharticus*.) After thorough tests we find this meets every requirement of the Northwest, perfectly hardy, a good grower, stands our severe winters unprotected without any signs of damage. The illustration given shows a driveway planted on both sides leading into our nurseries at Mayfield. This hedge has been planted three years; it is dense and compact as the illustration shows; should be planted in double rows, plants one foot apart and the rows one foot apart, breaking the joints so the plants are not opposite each other. We recommend this when a formal effect is wanted along highways, or when the grounds will stand a stiff hedge.

Berberry *Thunbergi*. Nothing can take its place as a low ornamental hedge for gracefulness or beauty, its habit is low and stately; slightly drooping and forms a hedge as broad as it is high; it has every good quality—beautiful habit, fine foliage, free-flowering qualities,—but its greatest charm is the great quantities of crimson berries which it produces in the summer, and which remain on the bushes all winter making it very effective in the winter landscape. It is also fine for cutting for house decoration, almost equal to the holly.

Purple Berberry

Berberry Purple. This shrub is used for various purposes being suited for hedging it is often used in this manner, also as a decorative, shrub, having a foliage of deep violet or purple; it makes a striking contrast with golden or green foliage plants when grouped together or is very effective when massed together in a clump. Like Thunbergi it produces berries which hang into the winter and are effective. It is more stiff and upright in its growth, and is valued as a hedge plant or for division or boundary.

***Cornus Siberica Alba*—Red Twigged Dogwood.**

A most beautiful Shrub as well as a hedge plant, for winter effect its stems and branches are a bright crimson. Unlike many of the other Dogwoods, it is suited for hedge work, as many of them will not stand pruning.

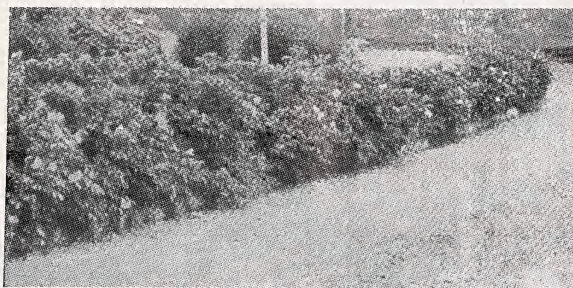

This variety originated in Siberia and is a special strain there being a number of others much like it, but not so hardy or so brightly colored, its hardiness and winter coloring makes it very attractive for City Hedging, it is also valuable for clumping in shrubs.

Honey Locust. In many sections of the North this is still considered the best. It is of vigorous growth, perfectly hardy, thrives with ordinary care and on account of its thorny nature is well adapted for farm planting.

English Hawthorne. A celebrated English hedge, which, after having been tested in the Northwest, is found to be equally as hardy as Buckthorn, and by many preferred. Flowers, single white.

***Cornus Siberica Alba*, "Red branched Dogwood"**

A Hedge of Rugosa

Honeysuckle Upright—*Lonicera Tartarica*.

One of our hardiest and best known shrubs in the Northwest when planted to hedges and kept pruned, make a very attractive hedge; its small blossom in the spring makes it quite attractive and in many sections is planted in preference to all others. It should not be planted in too large sizes, but small so as to make it branch close to the ground and become thick at the base.

Rosa Rugosa. This Japanese Rose forms a sturdy bush 4 to 5 feet high, covered with large, dark green, glossy foliage, crowned with terminal clusters of 10 to 12 flowers, each 3 inches in diameter. Perfectly hardy. A valuable plant for the hardy border or shrubberies, its large, handsome, fruits being very ornamental all through the Autumn and Winter months. It also makes a splendid hedge, its foliage being impervious to the attacks of insects of all kinds. For an untrimmed hedge there is nothing quite so effective, it looks well on borders, curved walks, drives or for screens; it has a beautiful foliage, dark green, making it a plant to be admired by all, it needs no protection being perfectly hardy, will stand any winter.

***Eleagnus Argentea*—Russian Olive.** A native of the plains of the Northwest. Drought, heat or cold do not effect it in the least, and it continues to grow very vigorously at all times. It has been highly recommended for farm hedges: by cutting back each season it forms a very dense, compact hedge of most beautiful appearance. The foliage is a silvery white, the flowers small, yellow and produced in great profusion. The fruit, which is produced in large quantities resembles red currants, and remains on the plant a long time before dropping.

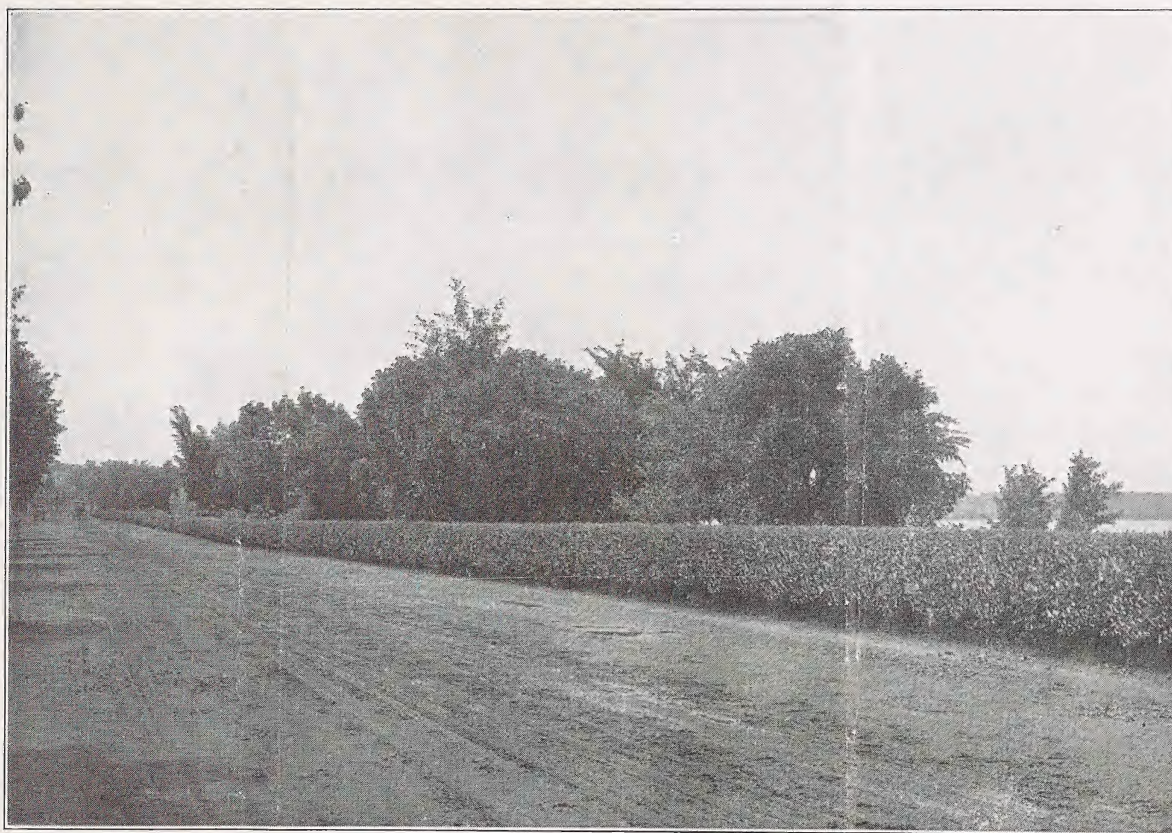

***Caragana Arborescens* (Siberian Pea Tree).** A hardy variety from Northern Russia, now being extensively planted in Manitoba and the Dakotas. The foliage resembles the Locust, the leaflet terminating in a short, sharp point. The blossoms appearing the last of May are a bright yellow, very showy and attractive. It is perfectly hardy everywhere, flourishes in the poorest soils and if properly trimmed soon forms an impenetrable hedge.

***Ligustrum Ovalifolium* (California Privet).**

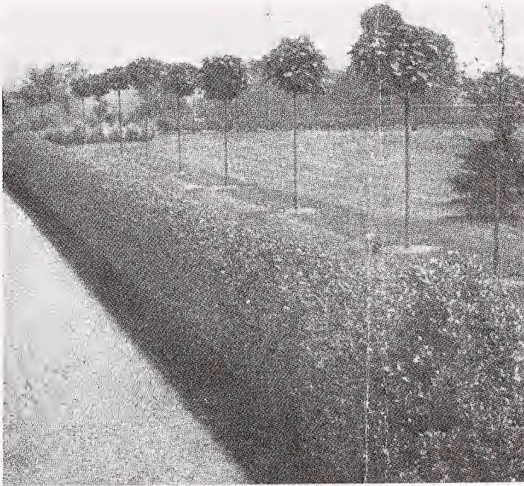

Nothing in the way of a hedge plant has attained in a short time the popularity of the California Privet. It can be kept at any desired height by frequent trimming, and grown successfully under the influence of sea air. Its dark green foliage, and hanging well into the winter makes it most an Evergreen, and is very attractive.

We cannot recommend this in the Northwest, it is not sufficiently hardy, we can recommend it south of Central Iowa but north of that something else should be used. We have a variety of Privet that has stood two winters at our nurseries which we may have something to say about later.

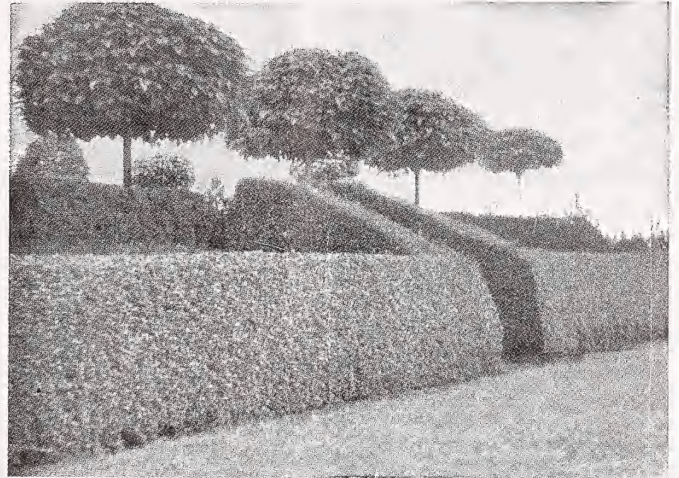

Japan Quince. The foliage is bright glossy green, retaining its color throughout the summer. The flowers, which are born in greatest profusion, are brilliant crimson, very showy and attractive, and are produced before the leaves in the spring.

Honeysuckle Hedge

Willow Vitellina

Siberian Sandthorn

Siberian Sandthorn. This hardy shrub or hedge plant was introduced by Prof. Hansen of the So. Dak. Experimental Station and has been tested by him for a number of years and has proven entirely hardy. It resembles the Russian Olive somewhat in appearance; the foliage being of a silvery coloring, growing dense and compact, making it one of the best plants for a hedge in the Northwest.

Willow Vitellina. A Russian variety entirely distinct in its habits from the other so-called Russian Willows; its bark is a golden yellow and quite bright, its branches very slender and fine, growing very compact and making a valuable hedge plant. Its propagation is rapid and it can be sold at a less rate than many of the hedge plants. It is desirable for farm yards and can be used for shelter screens. Should be trimmed at least twice a year.

Evergreen Hedges

Many are partial to Evergreens for Hedge planting. They are satisfactory in certain locations, but for city planting do not give the satisfaction of the deciduous plants; we recommend such varieties as Hemlock Spruce, (*Tsuga Canadensis*), Norway Spruce (*Picea Excelsa*), White Spruce (*Picea Alba*), American Arbor Vitae (*Thuja Occidentalis*).

***Tsuga Canadensis* (Hemlock Spruce.)** Our most graceful native Evergreen, retaining its dark pure green color all winter, its elegance and vigor to extreme age. Unpruned its growth is open, free and drooping; when pruned it becomes very dense. Makes a beautiful specimen tree and a good hedge.

***Thuja Occidentalis* (American Arbor Vitae.)** The American Arbor Vitae is one of our best known American Evergreens. The Thuyas as a family embrace many valuable varieties for all purposes. The majority of the Arbor Vitae are hardy and adapt themselves very readily to existing conditions. This variety *Thuja Occidentalis* is used to a great extent for hedges, being a rapid grower and readily responds to shearing. Its color is light green with an abundance of foliage, grows conical and compact in shape.

***Picea Excelsa* (Norway Spruce.)** This tree is perhaps the most popular member of the spruce family, planters being more familiar with its habits. Norway Spruce is a very fast grower, and is very hardy, adapting itself to almost any and all soils. This tree does very well for specimen planting; it makes a good form with branches drooping to the ground. It is considered valuable when a screen or dark background is desired.

Berberry Thunbergii

***Picea Alba* (White Spruce).**

A very hardy variety, used largely in ornamental groups. Resembles the other members of the Spruce family in its habits or growth. A fairly rapid grower, foliage a light green color.

Any information wanted relative to Trees, Shrubs, Plants or Vines or pertaining to Landscape work, will be given, and we will also show plans to those interested.
